Design common header for each page	Feier
Create common header	Brandon
Design a colour scheme for light mode	Keegan
Dark mode	Keegan
Figure out what templating system to use	Brandon

Minutes from Previous Meeting

In the previous meeting, we discussed what we will use for hosting and for the backend server. We decided to use Firestore to host our database and use Heroku to host the application. We initially talked about using Twilio to send users text messages, but then we realized that it wasn't free and gave up on it.
